A study of heterogeneous materials and wave propagation in phononic media

Bryan Chem

May 14th, 2018

Contents

1 Introduction **1**
- 1.1 Phononic media . . . 1
- 1.2 Mechanisms for band gap formation . . . 1

2 Dispersion relations **1**
- 2.1 Bloch's theorem . . . 1
- 2.2 Transfer matrix method . . . 1
- 2.3 Monatomic lattice . . . 1
- 2.4 Diatomic lattice . . . 1

3 Computational methods for phononic media **1**
- 3.1 Plane-wave expansion method . . . 1
- 3.2 Finite difference method . . . 1
- 3.3 Finite element method . . . 1
- 3.4 Multiple scattering method . . . 1

4 Analysis of lattice structures via real time evolution **1**

5 Analysis of 2D continuum materials via finite element method **1**

6 Current research in the field **1**
- 6.1 Nonlinear systems . . . 1
- 6.2 Damping . . . 1
- 6.3 Disordered materials . . . 1
- 6.4 Dynamic effective properties . . . 1

7 Conclusion **1**

8 Future work **1**

9 Acknowledgements **1**

A Appendix **1**

1 Introduction

1.1 Phononic media

1.2 Mechanisms for band gap formation

2 Dispersion relations

2.1 Bloch's theorem

2.2 Transfer matrix method

2.3 Monatomic lattice

2.4 Diatomic lattice

3 Computational methods for phononic media

3.1 Plane-wave expansion method

3.2 Finite difference method

3.3 Finite element method

3.4 Multiple scattering method

4 Analysis of lattice structures via real time evolution

5 Analysis of 2D continuum materials via finite element method

6 Current research in the field

6.1 Nonlinear systems

6.2 Damping

6.3 Disordered materials

6.4 Dynamic effective properties

7 Conclusion

8 Future work

9 Acknowledgements

A Appendix
